

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually a tool made out of high quality materials designed to be able to endure the most challenging operations and work environments. This particular piece of equipment could enable the individual driving to operate the blades hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the arms or the entire load in order to facilitate more accurate carrying and position in a faster and more effective method.

The only one of its kind blade pocket design enables operators to be able to safely swing the unit's forks without any worry of damaging the positioning cylinders. This can allow the worker the option to either execute independent or simultaneous fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be converted into fork positioners on existing units.
